

At WKU we monitor the impact that our graduates (completers) have on the learning of their students in the classroom. This graph compares the average annual growth of students in classrooms taught by WKU completers as compared to those taught by non-WKU completers. The data are scores obtained from the Fastbridge Universal Screening tool and Hought-Mifflin Growth measure utilized by the Warren County Public Schools. By providing access to these data, WCPS plays a critical role in aiding the EPP to conduct a comparative analysis of educational outcomes between completers and those educated elsewhere. **Results from the reading and math screeners during the past academic year indicate WKU completers' ability to positively influence student learning.**
